SUMMARY

Web developer with project experience across React, React Native, Expo, Node/Express, Shopify, Supabase, and static business websites. I build practical apps and websites with clear user flows, working data handling, deployment setup, and enough testing or verification to make the handoff usable.

TECHNICAL SKILLS

Frontend: React, React Native, Expo, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Vite, Next.js, responsive UI

Backend and data: Node.js, Express, REST APIs, Supabase, PostgreSQL, RLS policies, Zod validation, serverless functions

Ecommerce and websites: Shopify, Liquid, Shopify Admin GraphQL, product catalogs, collection pages, structured data, local SEO

Testing and delivery: Git, GitHub, Netlify, Render, EAS builds, Playwright, Vitest, Node test runner, sitemap/robots setup

Workflow: Requirements cleanup, AI-assisted coding, code review, debugging, browser QA, deployment notes, handoff documentation

PROJECT EXPERIENCE

Daily 60 - Expo Goal Planning App

Mobile app that turns a user's goal into a weekly plan with daily actions, reminders, reflections, and streak tracking.

- Built the app with Expo Router, React Native, Zustand, MMKV persistence, local notifications, haptics, and EAS build profiles.
- Created a TypeScript/Express backend so the AI provider key stays server-side instead of inside the mobile app.
- Added prompt handling, JSON extraction, Zod validation, quota checks, fallback responses, and Render deployment setup.
- Wrote Vitest coverage for AI parsing, quota behavior, install IDs, and streak logic.

FinTrack - Small Business Finance Dashboard

React/Vite dashboard for service businesses to review transactions, track budgets, understand recurring costs, and export finance reports.

- Built dashboard views for revenue, expenses, profit, category spend, budget progress, recurring overhead, and cash flow trends with React and Recharts.
- Added CSV import with duplicate checks, flexible column mapping, vendor category memory, import summaries, and persisted local data.
- Built review workflows for flagged transactions, weekly money reviews, Schedule C grouping, accountant CSV export, period reports, and printable summaries.
- Added Supabase Auth wiring and database tables with user ownership, indexes, triggers, and RLS policies.

Takebo Shop - Shopify Storefront

Live Shopify storefront for anime figures, Tokusatsu items, wall art, apparel, blind boxes, plush, and collectibles.

- Updated Liquid sections, snippets, collection templates, navigation, product presentation, and storefront QA.
- Improved catalog discovery with franchise and format-based collections, related collection blocks, FAQ schema, visible SEO content, and internal links.
- Used Shopify Admin GraphQL scripts for product cleanup, collection updates, SEO fields, and catalog maintenance.
- Checked theme changes with scoped pushes, Theme Check, public HTML review, structured data validation, and post-push storefront checks.

Wilde Digital - Portfolio and Lead Pipeline Site

Static service website with project pages, service pages, an ROI calculator, lead forms, mini CRM behavior, and Netlify deployment setup.

- Built the public site with HTML, CSS, JavaScript, structured data, sitemap/robots files, and Netlify configuration.
- Added ROI calculator logic, lead qualification, CRM status tracking, CSV export, local persistence, and fallback email flows.
- Planned Netlify function routing for lead handling with validation around honeypot fields, payloads, and ROI calculations.
- Maintained automated checks with Node's built-in test runner, including JSON-LD, JavaScript syntax, sitemap, and deploy mirror checks.

Luxury Solutions - Local Service Website

Static website for a Hamilton-area exterior cleaning business focused on service clarity, quote requests, trust signals, and local SEO.

- Built responsive pages for window cleaning, pressure washing, gutter cleaning, soft washing, deck/fence cleaning, commercial services, seasonal lighting, and service-area pages.
- Added calls to action, phone/email paths, location content, testimonials, recent work sections, trust cues, sitemap/robots files, and deployment packaging scripts.
- Created build, prerender, image optimization, SEO verification, and deploy-zip workflows for handoff.

ADDITIONAL PROJECTS

- Chatter: React/Vite and Capacitor app with an Express/OpenAI backend for real-time coaching, local speech capture, haptics, and privacy-conscious transcript handling.
- Chatter Mobile: Expo React Native prototype for call coaching, tablet/mobile/web layouts, speech output, and simulated negotiation guidance.
- Habit Tracker: Next.js and Supabase habit tracker with RLS, anonymous/email identity, owner-key isolation, RPC dashboard fetches, drag-and-drop ordering, charts, and Stripe integration.
- Daily 60 Base44 PWA: React/Vite habit product with Base44 auth/database/functions, Claude integration, Stripe premium purchase flow, push notifications, Resend email, and achievements.
- Maze Generator: Single-file Three.js browser game with procedural maze generation, top-down preview, first-person controls, collision handling, countdown transition, BFS enemy pathfinding, and win/lose loop.

- Volume Booster: Native Android project using Kotlin, Gradle, AndroidX, AppCompatActivity, Material components, Java 17 compatibility, and packaged app configuration.

STRENGTHS

- Breaks vague project ideas into user flows, tasks, and reviewable milestones.
- Works across frontend, backend APIs, persistence, QA, deployment, SEO, and handoff notes.
- Builds dashboards and business tools around decisions users need to make, not just raw data.
- Uses AI development tools carefully, with code review, testing, and direct verification before treating output as finished.
