SUMMARY

Web developer and digital product builder focused on turning ambiguous product ideas into scoped requirements, working interfaces, tested flows, and deployable web products. Project work spans React and React Native applications, Node/TypeScript APIs, Shopify ecommerce, Supabase-backed dashboards, lead-generation websites, AI integrations, SEO foundations, and deployment workflows.

TECHNICAL SKILLS

Frontend: React, React Native, Expo, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, responsive design, mobile-first UI, Vite, Next.js

Backend and data: Node.js, Express, Supabase, PostgreSQL/RLS, REST APIs, Zod validation, serverless functions, local-first persistence

Ecommerce and business: Shopify, Liquid, Shopify Admin GraphQL, collection architecture, ecommerce SEO, product catalog workflows, lead-generation websites

Tools and workflow: GitHub, Netlify, Render, EAS builds, Playwright QA, Vitest, Node test runner, CSV import/export, structured data, sitemap/robots setup

AI-assisted delivery: Claude, Codex, ChatGPT, prompt design, AI response validation, requirements planning, code review, debugging, testing support

PROJECT EXPERIENCE

Daily 60 - AI Goal Planning Mobile App

Expo React Native app with a TypeScript/Express backend that turns a user's goal into a structured seven-step plan, daily actions, reflections, streak tracking, and reminders.

- Built a mobile-first product architecture with Expo Router, Zustand, MMKV persistence, local notifications, haptics, and Play Store metadata.
- Implemented a secure AI backend so the Anthropic/Claude API key stays server-side; the API owns prompt construction, JSON extraction, Zod validation, rate limiting, fallback handling, and quota boundaries.
- Added backend deployment support through Render and mobile build support through EAS preview/production profiles.
- Covered core behavior with Vitest for AI parsing, quota behavior, install IDs, and streak logic.

FinTrack - Business Finance Dashboard

React/Vite dashboard for small service businesses to track revenue, expenses, budgets, cash flow, recurring costs, reviews, tax prep, and reports.

- Built dashboard views for revenue, expenses, net profit, profit margin, category spend, budget progress, recurring overhead, and cash flow trends using React and Recharts.
- Added CSV import with duplicate detection, flexible column mapping, vendor-to-category memory, import summaries, and persisted local data.
- Designed workflows for weekly money reviews, flagged transactions, Schedule C tax grouping, accountant CSV export, period reports, and copy/print summaries.

- Added Supabase Auth wiring and a database foundation with user-owned tables, indexes, triggers, and RLS policies for transactions, budgets, reviews, reports, vendor categories, and column presets.

Takebo Shop - Shopify Ecommerce Storefront

Live Shopify storefront for anime, figures, Tokusatsu, wall art, apparel, blind boxes, plush, and collectibles.

- Worked across Shopify Liquid theme sections/snippets, collection templates, navigation, SEO content, product presentation, and storefront QA.
- Organized catalog discovery through franchise and format-based collection structures, related-collection blocks, FAQ schema, visible SEO content, and collection-specific internal linking.
- Supported scripted Shopify Admin GraphQL workflows for product clarity, catalog updates, collection rules, SEO fields, and operational consistency.
- Verified theme changes with scoped live pushes, Theme Check, public HTML checks, structured data validation, and post-push storefront verification.

Wilde Digital - Full-Stack Portfolio and Lead Pipeline Site

Developer/service business website presenting shipped products, service pages, ROI calculator, mini CRM, lead forms, case-study content, and SEO-focused public pages.

- Built a dependency-free public site with HTML, CSS, JavaScript, structured data, service pages, sitemap/robots files, and Netlify deployment configuration.
- Implemented interactive lead-generation features including ROI calculator logic, lead qualification, mini CRM status tracking, CSV export, local persistence, and fallback email flows.
- Added Netlify function planning for lead routing with Resend/Web3Forms alternatives and validation around honeypot fields, payloads, and ROI calculations.
- Maintained automated checks with Node's built-in test runner; project notes record 43/43 tests passing plus JSON-LD, JavaScript syntax, sitemap, and source-to-deploy mirror verification.

Luxury Solutions - Local Service Business Website

Lead-generation website for a Hamilton-area exterior cleaning business focused on quote requests, service clarity, trust signals, local SEO, and mobile conversion.

- Built responsive pages for window cleaning, pressure washing, gutter cleaning, soft washing, deck/fence cleaning, commercial services, seasonal lighting, and service-area landing pages.
- Added quote-focused calls to action, phone/email paths, location content, testimonials, recent-work sections, trust cues, sitemap/robots setup, and deployment packaging scripts.
- Created build, prerender, image optimization, SEO verification, and deploy-zip workflows for a static production site.

ADDITIONAL BUILDS

- Chatter: React/Vite and Capacitor app with an Express/OpenAI backend for real-time social or sales coaching; supports web, Android/iOS builds, local speech capture, haptics, and privacy-conscious transcript handling.
- Chatter Mobile: Expo React Native prototype for live call coaching, tablet/mobile/web layouts, speech output, and simulated negotiation guidance.
- Habit Tracker: Next.js habit tracker using Supabase, RLS, anonymous/email identity, owner-key isolation, RPC dashboard fetches, drag-and-drop task ordering, Recharts, and Stripe package integration.
- Daily 60 Base44 PWA: React/Vite habit product with Base44 auth/database/functions, Claude LLM integration, Stripe one-time premium purchase flow, web push notifications, Resend email, and achievement logic.
- Maze Generator: Single-file Three.js browser game with procedural maze generation, top-down preview, first-person navigation, collision handling, countdown transition, BFS enemy pathfinding, and win/lose loop.

- Volume Booster: Native Android project using Kotlin/Gradle, AndroidX, AppCompatActivity, Material components, Java 17 compatibility, and packaged application configuration.
- Zack Portfolio: Personal portfolio site presenting project case studies, product process, technical capabilities, contact links, and public developer positioning.

STRENGTHS

- Turns vague ideas into requirements, user flows, implementation plans, and review criteria.
- Builds across the product surface: frontend, backend APIs, persistence, QA, deployment, SEO, and handoff documentation.
- Designs business software around user decisions, not just raw data display.
- Uses AI-assisted development tools with validation, testing, and technical judgment rather than treating generated output as final.
